

OUC-CGE: identical frames split across train/val

cos. sim. = 1.000000

high/view1076 (val, label=positive)

high/view1073 (train, label=positive)

cos. sim. = 1.000000

low/view2598 (val, label=negative)

low/view2603 (train, label=negative)

Masked-mean DINOv2 embedding, cosine similarity. Both pairs score exactly 1.000000 -- not near-duplicates, the same physical moment assigned to different splits.
